The **widest range of finishes** available on the market

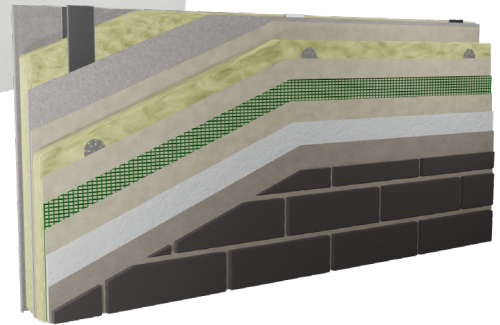

Mineral TC

Clay Brick Slip

Silicone TC

Acrylic Brick Slip

- KIWA BDA certified
- Ideal for high rise buildings
- Cost-efficient solution for steel frame structures
- Fewer components for a simpler install
- Widest range of brick & render finishes available
- Faster to install than a cavity containing EWI solution
- A1 fire rated thin coat renders & brick slip finishes available
- Suitable for new build & retrofit steel framed buildings

Clay Brick Slip Finish

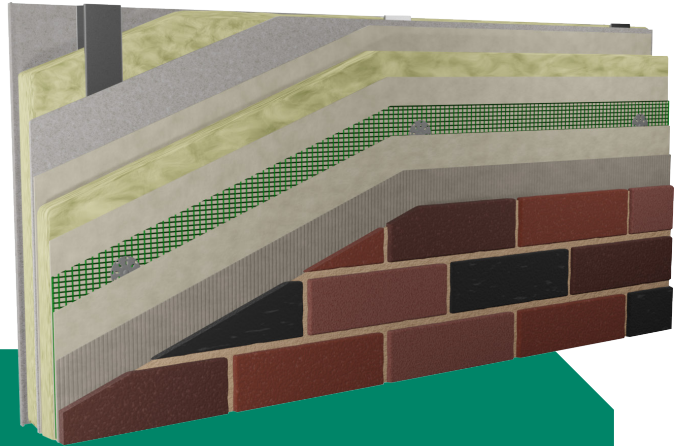

VBriQ+

Clay Brick System

VBriQ+ is a quick to install and cost-effective clay brick slip system. This finish is significantly lighter in weight but retains the look and feel of traditional clay bricks.

VBriQ+ offers a range of brick styles and colours to suit a specific project aesthetic or regional character. This finish option offers excellent durability and impact resistance.

VBriQ+ Clay Brick Slips achieve an A1 fire rating when used within the **Direct Fix M VBriQ+** EWI system.

BENEFITS

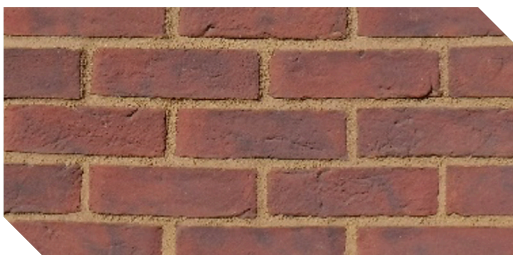

- A1 rated system offering the highest standards for fire safety (M VBriQ+)
- Suitable for use on high rise buildings
- Traditional real clay brick finish
- More lightweight than traditionally built brick
- Easier and faster to install than traditionally built brick
- KIWA certified
- Durable finish offering category 1 impact resistance
- Standard range of brick slips available in stock

Acrylic Brick Slip Finish

VBriQ

Acrylic Brick Slip System

VBriQ acrylic brick slips are ideally suited to any new build and refurbishment scheme where a brick finish is sought. With over 60 million slips installed globally, acrylic brick slips are increasingly being used to overcome many of the constraints associated with traditional clay brick.

VBriQ slips are accredited for use in a range of our EWI systems – including high-rise applications.

BENEFITS

- Cost effective to transport – up to 5,000m² of bricks can be transported per load
- KIWA certified
- Category 1 impact rating – available in a range of colours
- Quick and simple to install – often upwards of 10m²/day with no need for additional pointing
- A range of adhesive colours are available which also form the pointing mortar, allowing the desired aesthetic to be achieved
- High UV resistance to ensure that the original brick colour is maintained
- Fire rating up to A2, s1-d0 and suitable for use on high-rise buildings

VBriQ is a lightweight synthetic brick slip system that replicates the appearance of brick

Silicone TC Finish

Silicone TC

Silicone Thin Coat Render

Silicone TC incorporates the benefits of silicone technology to provide a water repellent final surface with a fresh and modern appearance. The silicone allows water vapour to pass freely through the render whilst allowing the finish to remain weather resistant.

Silicone TC contains a biocide to help prevent infection from mould, yeast and algae and also has a low susceptibility to soiling and contamination making it the ideal solution for a low maintenance, long-term finish.

BENEFITS

- Fire rating up to A2, s1-d0 and suitable for use on high-rise buildings
- KIWA certified
- Water repellent & breathable
- Durable, low maintenance finish
- Ready mixed
- Hand/spray applied
- Available in 20 standard colours
- Compatible with a range of EWI systems

Bespoke render colours also available
– talk to our team for details.

Mineral TC Finish

Mineral TC

Mineral Thin Coat Render

Mineral Thin Coat renders are cement based, silicone through-coloured renders, which only require mixing with water prior to use. Mineral TC is an A1 fire rated finish when used with mineral wool insulation. The silicone within Mineral TC makes these renders an attractive and low maintenance finish option and can be hand or spray applied at temperatures as low as 5°C. Mineral TC offers up to 12 standard colours (bespoke options are available upon request).

BENEFITS

- A1 fire rating when used with mineral wool insulation
- KIWA certified
- Range of 12 standard colours
- Silicone containing & water repellent
- Polymer modified for flexibility & durability
- Suitable for new build & refurbishment projects
- Suitable for use on high-rise buildings
